

BIM POLICY

BCM is fully committed to the use of Building Information Modelling (BIM) on future projects. We are already utilising BIM on a number of projects via Autodesk Revit software.

The BIM process aids us in our approach of continually challenging design and results in shorter timescales and better quality. The BIM process can integrate with our Dynamic Thermal Modelling software again reducing timescales and improving collaboration.

On projects where BIM is implemented we work closely with the entire team to ensure that the benefits are achieved and all the lessons learnt are used to drive improvement across the whole BCM business.

We have progressed our in-house capability and are on target to meet the Government's deployment strategy for Level 2 BIM on all projects by 2016.

BCM believe we can deliver significant improvements in cost, value, time and energy efficiency to our clients through active collaboration and the use of open sharable asset information.
